run workday agent

Read the SKILL.md for xlsx ⌄

▤   Read the SKILL.md for xlsx

⊘   Done

Now let me carefully analyze all the data before building the spreadsheet.

Ran 3 commands ⌄

>_   Check available scripts

Script

>_   Find recalc script

Script

>_   Copy recalc scripts

Script

⊘   Done

Now let me carefully plan all the data. I'll write a comprehensive Python script to build the spreadsheet:

Build and test the data logic ⌄

>_   Build and test the data logic

Script

⊘ Done

The data looks good. Now let me build the full Excel spreadsheet:

Ran 3 commands, read a file ⌄

>_ Create the Excel spreadsheet

Script

>_ Recalculate formulas and check for errors

Script

>_ Copy to outputs

Script

▤ Presented file

⊘ Done

Here's your workday tracker. The workbook has 8 tabs in this order:

Summary — Domicile/employer info, RSU block stats, NYS 2025 post-move total (31 days), and the NYS tax rules reference at the bottom.

NYS_2025_PostMove — All 31 NYS workdays in 2025 after your 2/15/25 move to WA. These are days you physically worked in NY (Rule 1A) with no employer withholding — three NYC trips: June (10 days), July 14–29 (12 days), and October 6–17 (9 days, excluding Columbus/Indigenous Peoples' Day 10/13).

RSU_Block1–4 — One tab per block showing every day from grant (1/23/23) through vest date, with NYS%, vacation, holidays, sick days, and WFH counts summarized at top.

Daily_Log — Full day-by-day log from 1/1/23–2/13/26 with location, purpose, NYS/non-NYS classification, RSU blocks still vesting, and domicile. Color-coded: green=NYS workday, yellow=non-NYS, blue=vacation, peach=WFH, light green=holiday.

Travel_Log — All vacation, WFH trips, and work travel with dates, airports, type, and notes.

A few items flagged with "XXX" in your source files (e.g., whether there were work days mixed into some vacation trips, the 11/11/24 SFO WFH ambiguity) — review those in the Daily Log and let me know if you want to adjust any classifications.
